

## **Anitian Completes SOC 2 Type I Certification for Security Operations Services**

*This rigorous audit validates Anitian as a trusted partner for cloud security operations*

PORTLAND, Ore. ([PRWEB](#)) December 02, 2019 -- Anitian, a DevSecOps company offering a cloud security compliance platform, today announced that it has successfully completed the Service Organization Control (SOC) 2 Type 1 audit for their Compliance Automation SecOps and Managed Detection and Response services. Conducted by Frank, Rimmerman Co. LLP, a leading CPA firm, the audit affirms that Anitian's information security practices, policies, procedures, and operations meet the SOC 2 standards for security, availability, and confidentiality.

As more companies outsource security operations, there is an increasing need for trust and transparency into cloud security providers.

Anitian's SOC 2 report verifies the existence of internal controls which have been designed and implemented to meet the requirements for the security principles set forth in the Trust Services Principles and Criteria for Security. It provides a thorough review of how Anitian's internal controls affect the security, availability, and processing integrity of the systems it uses to process users' data, and the confidentiality and privacy of the information processed by these systems. This independent validation of security controls is crucial for customers in highly regulated industries.

"We view this certification as part of our deep commitment to our customers' security and privacy," said Andrew Plato, CEO of Anitian. "We will continue to invest in the security and compliance automation to help our customers accelerate their business to ludicrous speed."

In addition to SOC 2 compliance, Anitian continues to refine and augment their security operations. In the past year, Anitian has rolled out numerous enhancements to their flagship Compliance Automation platform. Recently, Anitian began offering FedRAMP High security operations services, which demand rigorous continuous monitoring and security for highly regulated SaaS providers.
